

JACK GLADNEY, asks you.

How much is 20 per cent? It is one-fifth of a 75 point game. In doubles it means that the color shooting first must play 20 per cent better shuffleboard than the color shooting last in order to tie the game. Taken as a whole, shuffleboard courts are the most one-sided and unfair playing surfaces in any sport. Yet, it is the only game that does not change sides, ends or both. You ask? How can all players have an equal chance to win? The answer. Each player or team plays eight shots on each color. Try it, you will like it. (Paid Adv.)
