

PLAYER DRAW TOURNAMENT

by Walt Wollemon, F.S.A.T.D.

EQUIPMENT NEEDED: 2 x 3 cards for players at registration. 3 x 3 cards for players at draw for LINE and COURT NUMBER. A 64 slot rack for registration cards is a help at registration. When entry sheets are in a numbered registration list of all (teams or singles) must be made out. List should have CLUB at top of each club's entry list so that club stands out for ease of finding players names while registration is in process. 2 x 3 cards must be numbered same as list with players names and club and placed in rack for registration. At close of registration 2 x 3 cards left in rack and no-show lines on list must be the same. A separate table is used for write-in players. Start that list with the next number after the main list number. Take the last number of the write-in list and deduct any 2 x 3 cards left in rack that will be the total number of teams or singles that will be on the chart. Then the tournament director will set up the "byes" and "court numbers" assigned to players. Court numbers should be on chart before draw cards are made out. Line numbers and court numbers must be on draw cards. After draw cards are checked they are placed on a table for the players to pick one for the chart. Only players with 2 x 3 cards will pick a draw card. Players then go to court assigned and when all players are at their court, will sign score card with FULL NAMES and LINE numbers. Players are then ready to try court for speed. Court officials should see that score cards have court number and names in the right place on cards.

All "byes" should be "back to back" so that all matches may be played at the same time if there are enough courts. See chart below. Byes should be distributed over the ENTIRE chart so that all players have an equal chance to draw a bye. A sub-bracket is only used for a very few teams over a full chart.

This chart has 8 byes. More can be added, but keep them as even down the chart as possible.

If sub-bracket is used, place the byes evenly down the entire chart.
